## FAQs

### Q: How do I know if I am a good candidate for MINT™ PDO?

A: For optimal results, the ideal candidate should have a skin layer that is not too thin or too thick and not extremely uneven. The skin should be thin enough so MINT™ PDO can make a visible difference and thick enough so the threads are not too close to the surface of the skin. One way to check before a consultation with your provider is to lay down on your back and see if you like the way your face looks, as it can be a good indicator of how effective MINT™ PDO can be. Lastly, please consult with the physician if you are an optimal candidate for MINT™ Procedure.

### Q: How safe are Mint Threads?

A: MINT™ threads are made from a complex sugar polydioxanone or PDO - a safe suture material that has been used in orthopedic and cardiovascular surgeries for over 30 years. MINT™ is also backed by more than 6 years of published studies for its safety and is the first and only PDO suture in the US market to have received dual FDA clearances, TGA and CE approved.

### Q: What kind of results can be achieved with MINT™ PDO?

A: MINT™ PDO results are immediate. You do not have to wait weeks and months to see your results. Although individual results may vary, common results achieved with MINT™ PDO include:

- Heart shaped, higher cheekbone contour
- Exotic, cat eye contour
- Snatched, defined jaw line
- Softer smile lines
- Softer eyebrows
- Smoother neck lines

### Q: Can I have other procedures with Mint Threads?

A: MINT™ PDO is a great procedure to get in conjunction with other treatments such as lasers, PRP, injectables, BOTOX®, and fillers. The threads can be used to target sagging skin and fillers can be utilized for deep lines to create an overall youthful appearance to the face. You must wait at least 3 months before having any Laser treatment.

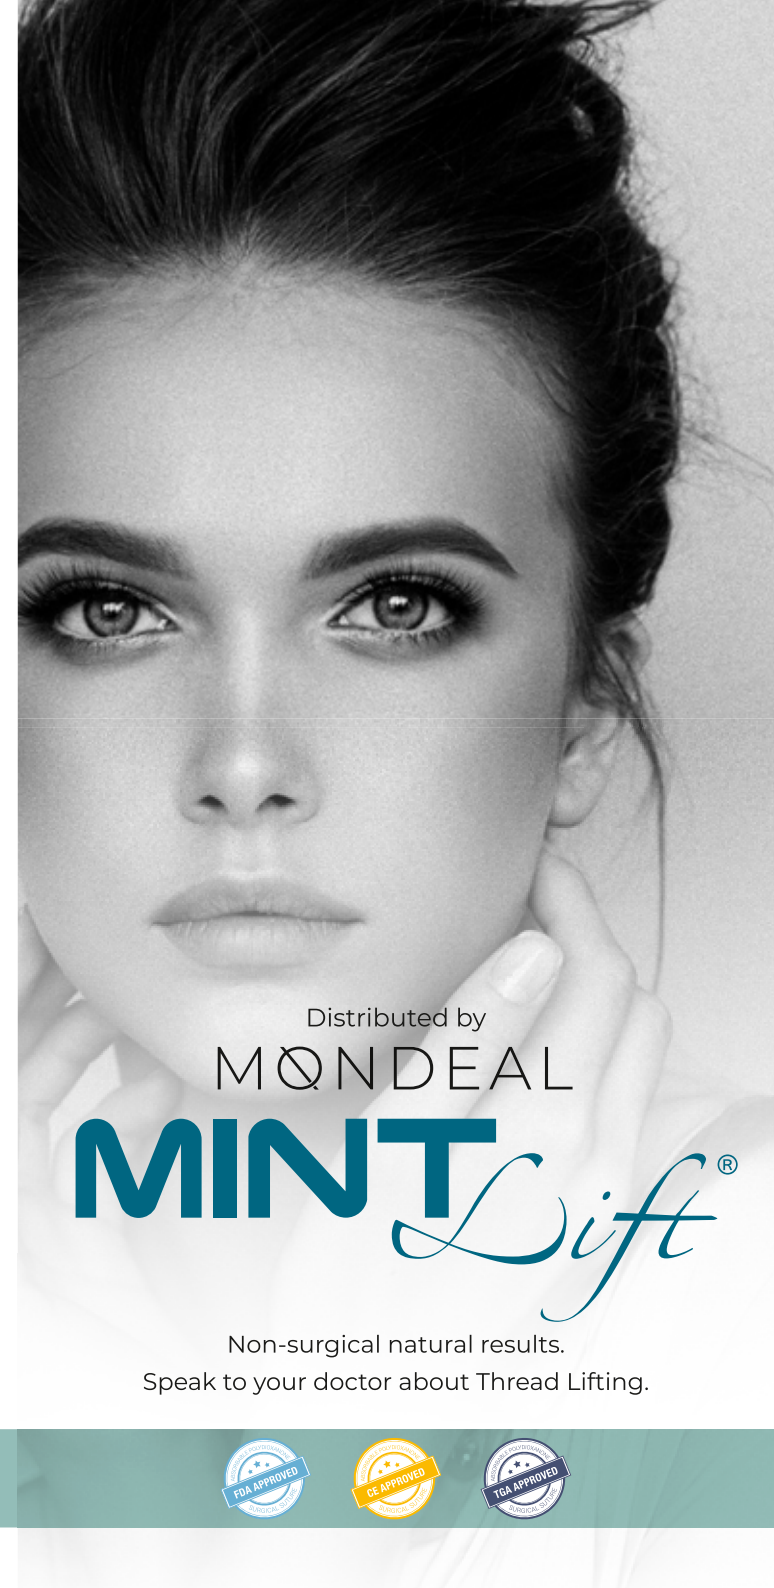

Ask your provider to learn more about treatment combinations to maximize the effects of MINT™ PDO.

### Q: How long does the MINT™ PDO procedure take?

A: The procedure takes an average of one hour but can take anywhere between 45 minutes to 90 minutes. Patients will see immediate results after the procedure. We recommend patients to consult with their providers prior to the procedure day to discuss the look they desire and the results they can expect.
